

Kre-Alkalyn^R

US Patent 6,399,661

with patents and patents pending globally

“Press Release”

Since Kre-Alkalyn^R's release back in 2001, it has grown to become the most recognized, studied and used form of creatine anywhere in the World. But as with all popularity comes critics. Some critics have gone as far to publish FALSE articles and posting on the internet.

All American Pharmaceutical has done extensive research to prove that Kre-Alkalyn^R is the World's only stable creatine. Not only in a aqueous solution, but also in the stomach.

Stability of Kre-Alkalyn® was:

**first proved to numerous patent offices around the world including the USA*

**was re-proved at two independent testing labs in the USA*

**The final proof is what you are about to see below*

Kre-Alkalyn^R - “Staying power to go the distance”TM

You care about the quality of that creatine supplement you put in your mouth – so do we! Each and every gram of our alkaline-buffered Kre-Alkalyn® is produced in accordance with cGMP regulations, and designed to be stable enough to ‘go the distance’ – right down to the last pill in every bottle or the last gram in every barrel. So, when a small, independent investigator last year, questioned the stability of our product, we didn't try to side step the issue. Instead of simply ‘blowing it off’ (as another company might have), we rose to the challenge, put our money where our mouth was, and hired an independent testing laboratory to put Kre-Alkalyn® to yet another test.

An exhaustive 97 samples of the Test Substance (the laboratory was not told they were testing Kre-Alkalyn®) were tested under acetic condition that could be expected to be found in either the stomach or the upper G.I. tract, for a full hour – far longer than is necessary for a substance that is rapidly absorbed.

AND THE RESULTS:

The stability of our product was verified with an average of no more than a 1- 3 microgram of variation (a microgram is 1/1000 of a milligram) in any sample, irrespective of the time it was tested or pH it was tested in. That data (on file at the company) told us what we already knew – our product is really that good – period!

This new clinical independent study has now put the stability question of Kre-Alkalyn® to bed. **It is 100% stable like we have been saying since 2001.**

WHY would you want to use any other form of creatine now that you know the TRUTH?
